

This image shows a Twin Valve with Diverter (2 outlet options).

The ¼ turn diverter can send water to a choice of two outlets, shown here using a slide rail shower kit and a shower head and arm, but can be used to control any two outlets (body jets, tub spout etc). The water does not flow from both outlets at the same time. Select either outlet 1, outlet 2 or 'off'.

The Thermostatic handle controls the temperature.

Our valves are suitable for use with all systems: gravity fed, pumped, unvented high pressure or fully modulated combi-boilers.
